Hun Sen Batheay High School  
2020

## Skills

- HTML, CSS, Tailwind CSS
- JavaScript, Typescript
- React JS
- Next JS
- Angular
- Nest JS
- Express JS
- Ant Design / Material (UI)
- Git / GitHub / Bitbucket

## Language

- English
- Khmer

## Professional Experience

2024

-

2026

### Front-end Developer

Polygram solution | Sangkat Tuol Tumpung Ti Muoy

- Spearhead the development of high-performance, user-centric web applications using Angular and TypeScript, significantly enhancing the digital experience for end-users.
- Translate complex UI/UX design wireframes into pixel-perfect, responsive, and accessible code using Angular Material and Tailwind CSS.
- Extend technical impact to the server-side by contributing to the development of a hospital management dashboard using Node.js and Express.js; architected custom API endpoints to streamline data delivery, directly resulting in faster front-end state synchronization and improved dashboard responsiveness.
- Implement robust state management using RxJS and Angular signals to handle complex, real-time data flows, ensuring a seamless and bug-free experience for hospital staff.
- Collaborate within an Agile framework alongside cross-functional teams to refine product requirements and architect scalable technical solutions.
- Optimize front-end architecture to ensure consistent, seamless performance across all modern web browsers and mobile devices.
- Engineer full-stack solutions for a hospital management dashboard by developing scalable RESTful APIs with Node.js and Express.js; optimized server-side logic to accelerate front-end data synchronization and reduce latency.

2023

-

2024

### Front-end Developer

Wonderpass Technology | Sangkat Chak Angrae Leu

- Boosted user engagement by 15% by architecting and implementing interactive UI components with Tailwind CSS, leading to a more intuitive user experience.
- Seamlessly integrated RESTful APIs to enable dynamic data handling and real-time user interactions, reducing data loading
- Championed the adoption of TypeScript across two major projects, increasing code quality and reducing runtime errors.
- Accelerated feature development and team workflow by utilizing Git for version control in an Agile environment, collaborating closely with UI/UX designers and backend developers.
